

How to Make GAK - not so sticky slime!

Ingredients:

2 cups glue (we use Elmer's school glue)

8 TBSP borax

4 cups water

food coloring (optional)

glitter (optional)

markers (optional)

Directions:

- Mix 2 cups white glue with 1 1/2 cup water. Stir until completely mixed.
- In another bowl, mix 1/2 cup water, (add food coloring and/or glitter here if you want), and 2 TBSP Borax Soap.
- Pour Borax mixture into the glue mixture and stir. Pull out the gak as it coagulates, and put it to the side.
- Mix another solution of water and borax and pour into the remaining glue mixture. Stir and pull out.
- Continue until the glue mixture is gone. Do not put on paper towels - it will really stick.
- Store in a plastic bag.

Make sure you seal it up really well when you are done using it. You can store it in the fridge for later.

If it happens to get on the floor or in someone's hair, clean it up fast! The longer it sticks, the harder it is to clean.
